

PYTHON 3.0

HIGH-PRESSURE DEVICE FOR HYDRODYNAMIC SEWAGE CLEANING

PYTHON 3.0 is a functional device with small dimensions, designed for hydrodynamic cleaning of sanitary, rainwater and industrial pipes. The device was developed and manufactured based on the PYTHON 2.0 model.

Unlike it, the PYTHON 3.0 device is equipped with a more powerful engine and a high-pressure pump with higher parameters. The machine can be mounted in vans or on 1- or 2-axle transport trailers. It is possible to equip the PYTHON 3.0 device with a radio remote control, as well as with a hydraulic drive of the working reel.
